

98-02 Camaro Bolt On Rear Fender Dzus Tab Installation Part # 704072-2

This shows the location of the rear fender dzus bracket. Using the factory rivet locations grind the rivet heads off and knock the rivets out with a small punch. Mount rear dzus tab with supplied rivets at the two factory locations. With a rivet gun pull the rivet up about $\frac{1}{2}$ way or just snug so the plate can be adjusted up and down for the proper height. Once proper height has been determined finish pulling the rivets. Next drill and rivet the center hole to lock the plate in place.
